

# Petio Launch Scope — June 14, 2026

**Date:** 2026-05-02 · **For:** Ngoc, James

App reorganizes around **5 tabs**: Home · My Pet · Peti (center) · Scan · Memory.  
No Reminders tab · No Stats tab · No Family screen. Settings + Notifications live in header icons.

## 1. What Ships

| Feature                                                  | Where it lives          | Status                 | Owner           |
|----------------------------------------------------------|-------------------------|------------------------|-----------------|
| Onboarding (gamified pet creation, 9 steps)              | First-run flow          | Needs design           | Ngoc            |
| Pet profile (create + view, with allergens & conditions) | My Pet tab              | Needs design           | Ngoc            |
| Home (empty + populated states)                          | Home tab                | Design done in Figma   | Ngoc → James    |
| Peti AI chat                                             | Peti tab (center)       | Design done            | Ngoc → James    |
| Product scanner (barcode → Safe/Caution/Unsafe per pet)  | Scan tab                | Design done            | Ngoc → James    |
| Document upload + @mention in chat                       | Quick action / chat     | Design done            | Ngoc → James    |
| Paywall (annual default, VND tier)                       | Onboarding + contextual | Light refresh needed   | Ngoc light pass |
| Memory tab                                               | Memory tab              | 🟡 Flex — see §3        | Ngoc + James    |
| Tiny Moments / Aww card (placeholder)                    | Home                    | "Coming soon" CTA only | James           |

| Feature                       | Where it lives         | Status                        | Owner |
|-------------------------------|------------------------|-------------------------------|-------|
| Auth (Google / Apple / email) | Pre-onboarding         | Visual refresh only           | James |
| Settings hub                  | Header icon            | Adapt existing                | James |
| Notifications center          | Header icon            | Adapt existing                | James |
| Scanner share card            | Post-scan share button | Auto-generated from scan data | James |

## 2. What's Removed (Schema + UI Both Gone)

| Feature            | What goes away                            | Knock-on effect                                                     |
|--------------------|-------------------------------------------|---------------------------------------------------------------------|
| <b>Reminders</b>   | Tab, CRUD screens, push schedules, schema | Vaccine date becomes a static profile field, no auto-reminders      |
| <b>Statistics</b>  | Tab, charts, weight tracking, all metrics | Peti can talk about weight but can't render the health chart widget |
| <b>Family Sync</b> | Invitations, member roles, shared pets    | Single-user only · <b>Memories have no comments/reactions</b>       |

## 3. Flex Scope — Memories

Decision deadline: **June 1, 2026** (2 weeks pre-launch).

- **If Ngoc lands design by Jun 1** → ship full Memory tab: create memory (photo + caption + feeling + tag pet), calendar view, gallery view, detail screen. No comments/reactions (Family is cut).
- **If not** → tab stays in nav with empty state "Coming soon — your pet's photo journal." Tiny Moments card on Home routes to the same toast.
